

Compliance Made Easy

## InSite

InSite is a cloud-based software that allows you to remotely monitor your Pro Range installations. Manage your Pro devices in real-time from any location and gain control over compliance in your building.

### Overview

InSite is a cloud-based solution accessible on any web-based device to enable remote diagnostics, and the use of software features.

There is no software installation required, nor complicated network settings to manage, simply install the ProHub system controller and connect it to the internet.

ProHub will connect to the cloud and report system functionality straight through to your internet device.

### Features

- Real-time device monitoring
- Intuitive Graphical User Interface (GUI)
- Cloud-based software
- REST API integration to 3rd-party software
- Optimised software for any mobile device
- Soft/hardware-driven inputs/outputs
- Turnkey solution

- Internet connection 100M/1Gbit ethernet or wifi with WPA2 security (back up connection options available)
- Firewall port forwarding not required
- TCP/IP Protocol used is (https) on port 443
- Also needs access to DNS server, NTP server
- Requests all parameters over DHCP, so a reservation should be set if a fixed address is required.
